Care for Bronze Hardware

Never use spray or liquid furniture polishes to clean your bronze hardware. These polishes may contain oils which could damage the original patina finish.

In climates with higher humidity, coastal areas, or areas with a higher concentration of airborne pollutants, cleaning and waxing may be needed twice a year.

Applying Wax

All bronze darkens with age, however waxing may slow the process of oxidation.

To apply the wax, you need two - one to two inch paint brushes that will be used only for cleaning bronze. Do not use brushes that have been used for other purposes as chemicals may remain in the bristles and if transferred to the patina finish, may cause permanent discoloration.

Start by applying a protective circle of tape around the metal ferrules that hold the bristles in the brushes you are using. This will help prevent scratching of the surface when applying the wax and when dusting.

Wipe bronze free of any dust and fingerprints using a clean, dry, cotton cloth. Use one of the brushes to remove dust from small crevices or hard to reach places.

Use “Renaissance” wax, or other “microcrystalline” waxes, because they are inert and will not yellow over time. Apply to the second brush, with three or four, back and forth, sweeping strokes. Do not dab the brush in the wax. This could cause an abundance of wax to be applied to the bronze that could actually harm the patina surface. Dab the brush on the lid of the wax can to remove any excess wax. Lightly apply a super thin coat of wax to the surface of the bronze using gentle sweeping motions. Apply more wax to the brush as described, working it down into crevices.

Caution - Using too much wax may remove previous layers of wax. It is very important not to apply too much wax or work it into the surface to vigorously. Cover the entire surface with wax and let it dry according to the directions on the container.

Separate Brushes

Keep your brushes separate in labeled bags, free from contaminants, for future use. Use a clean, dry, cotton cloth to gently rub, in a circular motion, the dried wax from the bronze surface until you achieve the desired sheen. To achieve a dull finish, do not rub the surface after waxing.

To achieve a better protective coating, you may want to re-apply a second coat using the same technique.

Outdoor Bronze Hardware

Outdoor bronzes requires a regular maintenance program, which keeps the product surfaces clean and waxed.

Coastal Bronze sells wax for maintaining the hardware. (See Price List)
60-100 Ring Turn Drop Bar Latch
Operable from both Sides. Drop Bar 7”,
